

Cutting Edge Services.... Delivered.

FiveRivers Technologies is a fast growing Information Technology company focused on providing IT products and services. We excel in working with international customers to deliver high quality, cutting edge solutions to meet the needs of the global marketplace. Not only do we provide product development and design, but we also significantly extend the strategic Intellectual Property portfolio of our partners. Our solutions are deployed at some of the world's largest companies and our expertise areas include Systems Management, Embedded Design, Mobile Applications, Location Based Systems, Web Applications and Enterprise Workflow Solutions.

In collaboration with our customers, we have developed and refined a unique business model, with the flexibility to structure each outsourced relationship completely independent of others. For several of our clients, we are able to provide independent acquirable entities that exclusively perform work for a particular customer. This structural arrangement creates a "Chinese Wall" and removes any issues of intellectual property even accidentally being shared from one client to the other. It also enables our customers to take ownership of the offshore entity as part of going public or being acquired.

Our focus is on winning our customers' trust and providing the infrastructure and services to create, manage and run dedicated development centers, uniquely tailored to the needs of each customer. In doing so, we leverage the skilled manpower and extremely competitive infrastructure available in Pakistan, for our customers' business benefit. These are just some of the unique elements we bring to our business relationships. Our management team has decades of experience doing business in the US and Europe, and is extremely familiar with the expectations, work environment, communication style, intellectual property ownership and other concerns faced by a customer entering an outsourcing relationship.

Low Cost – High Tech

FiveRivers is based in Pakistan and makes full use of the low-cost infrastructure, large and highly skilled IT talent pool, universities and research institutions and the extremely competitive IT infrastructure available in the country. Pakistan's economy is in hypergrowth, experiencing GDP growth of 8%. The largest stock exchange in the country has provided the best returns of any exchange in the world, over the last five years. The Pakistan government provides unparalleled incentives to the technology industry, such as a 10-15 year taxation holiday (100% tax free) on software revenues. The government has also developed "Software Parks", or very large incubator facilities, in all the major cities of the country.

Pakistani companies have supplied software to clients as diverse as the States of Arkansas and New Mexico, Citibank, Bank of America and the Massachusetts Institute of Technology. Road links with China allow cost-effective exports to the world's largest market, as well as import of low-cost electronics and components. In 2002, Pakistan ranked 9th (Australia being number 10 and the US, number 1) on the top 10 list of countries with the highest number of certified IT professionals. Pakistan has the strongest and cheapest telecommunication infrastructure in the entire region. It is currently deploying the world's largest wireless broadband, WiMax network. There is a countrywide GSM/GPRS enabled cell phone network, along with extensive fiber infrastructure. Cable, DSL, ISDN, Satellite downlinks and higher capacity leased lines are available along with a variety of other value added telecom services.

Sirius Handheld Computer

- Low cost mobile device for emerging markets
- Flexible architecture and Open API
- Multitasking, Graphical "AlephOS" Operating System
- Serial Comm, QWERTY Keyboard and Backlit display
- Supports English and Urdu

FiveRivers has completed extremely complex and cutting edge projects, such as the Sirius computer. FiveRivers developed the hardware, OS and applications for this device.

FiveRivers hardware and embedded solution products showcased at an Asian IT conference (Softec 2006).

Customers

In addition to customers in Asia, FiveRivers has provided services to a number of US based companies. A sampling of these customers is provided.

ClearCube Technology, Texas, USA

ClearCube Technology is the global market leader in PC Blade solutions, delivering always-on, secured computing to every user, every time, everywhere. ClearCube provides a managed desktop solution that delivers Intel-based PC functionality to a user's desktop from a centralized environment. By centralizing computing assets in a single location, ClearCube PC Blade solutions provide a dramatic, measurable improvement in the ease, efficiency, and cost-effectiveness of managing and supporting PCs.

BarZ Adventures, Texas, USA

BarZ Adventures is a Texas based technology company focused on creating location based information delivery platforms. BarZ was founded by technology industry veterans with experience at leading Bay Area software companies. FiveRivers is proud to be developing BarZ's mobile information delivery system.
